Code Relay

Event Description

- This event is designed to test the speed, accuracy, and teamwork of participants in a unique coding relay format.
- Each team will consist of exactly four members who must solve problems in a fixed sequence, passing their progress like a relay baton.
- The competition will be held across three rounds of increasing difficulty, with the time taken by each team recorded and displayed on a live leaderboard after every round.
- Each round begins with a 5-minute reading period during which the team reviews the problem statement together before any coding begins.
- By the end of the contest, the cumulative times will decide the winners, with the top three teams being awarded.
- The event encourages participants to balance quick thinking, coding precision, and silent, effective collaboration under pressure.

Eligibility Criteria

- Open only to 1st year students from any department and college.
- Participation is team-based with exactly 4 members per team.
- Prior registration is mandatory.
- Basic knowledge of at least one programming language (C, C++, Java, Python) is recommended.

Rules & Regulations

1. Participation Guidelines

- Each team must consist of exactly 4 participants.
- Only approved programming languages (C, C++, Java, Python) may be used.
- No use of the internet, AI tools, or external references is allowed.
- Each team member can only code during their assigned turn.
- All participants must maintain discipline and adhere to the event timeline.

2. Event Format & Rounds

- Each round begins with a 5-minute silent reading period: the team reads and understands the problem statement together.
- No verbal communication between team members is allowed at any point during the round — not during the reading period, and not while coding.
- Team members may only communicate with each other through comments written directly in the code editor (e.g., leaving a note in the code for the next member to read).
- One member codes for 2 minutes, then the next member continues from exactly where the code was left off, reading any in-code comments to understand the approach.
- Once a time slot is completed, the code is handed over to the next member in sequence.
- Switching out of sequence is not allowed.
- The team with the minimum cumulative time across all three rounds wins.

3. Evaluation/ Scoring Criteria

- **Accuracy:** Correctness of the final output.
- **Time Efficiency:** Speed of completion.
- **Optimality:** Quality and efficiency of the code (e.g., avoiding unnecessary steps, clean logic).
- **Coordination:** Clarity and usefulness of in-code comments used to hand off between members.

4. Disqualification Factors

- Having less/more than 4 members in a team at that moment.
- Any verbal communication between team members during the reading period or while coding.
- Breaking relay sequence or sharing solutions across members.
- Use of prohibited materials/tools.
- Misconduct or unsportsmanlike behavior.
