

TECH TREASURE HUNT 2.0

Event Overview

Tech Treasure Hunt 2.0 is a team-based competition that blends cryptography, logical reasoning, and real-world exploration into one adrenaline-fuelled challenge. Teams race against the clock through four progressively harder clues — from binary decoding and cipher-breaking to location riddles and a science-and-technology parajumble — to reach the final checkpoint. Speed, accuracy, and teamwork decide who advances, with the top 5 fastest and most accurate teams earning a place in the Finale Round.

Eligibility Criteria

- Open to all — students, professionals, and enthusiasts from any college, university, or organization across India.
- Participation is strictly team-based, with a maximum of 4 members per team.
- Prior registration is mandatory; on-spot registrations will only be accepted if slots remain open.
- Each participant may be part of only one team.

Participation Guidelines

- Teams must report to the starting point at the scheduled time with their registration confirmation and valid ID.
- All 4 team members must move together between checkpoints — splitting up is not allowed.
- Each clue must be attempted at its designated checkpoint only; skipping ahead is not permitted.
- Mobile phones may be used strictly for scanning QR codes and basic decoding (e.g. binary/cipher conversion) unless otherwise restricted — see Clue Rules below.

Clue Structure & Format

The hunt is built around four clues, each unlocking the location of the next. Every team is given a fixed 15-minute window to complete the hunt.

Clue	Delivery Format	Content	Task
Clue 1	QR code scan at start point	A string of binary bits	Decode the binary into text to reveal the next location
Clue 2	QR code scan at Location 1	Caesar cipher encoded text	Decode the cipher to reveal the next location
Clue 3	Printed card at Location 2	A location-based riddle	Solve the riddle to identify the next checkpoint
Clue 4	Printed card at Location 3	Scrambled (parajumble) science & tech word/phrase	Unscramble and write the correct word to finish the hunt

Clue-Specific Rules

- Clue 1 (Binary): Teams decode the binary bit string themselves or with any standard offline method — no restriction on tools for this clue.
- Clue 2 (Caesar Cipher): Teams must decode the cipher to reveal the next location — no restriction on tools for this clue.
- Clue 3 (Location Riddle): Must be solved using only logic and general knowledge. Use of search engines, AI assistants, or any internet-based tool is strictly prohibited and will lead to immediate disqualification.
- Clue 4 (Parajumble Challenge): Teams must unscramble the given words and write the single correct final answer. Use of search engines, AI assistants, or any internet-based tool is strictly prohibited and will lead to immediate disqualification.
- A strict 15-minute limit applies to complete the hunt; teams unable to solve within the time limit will be marked accordingly by the on-ground volunteer and directed as per organizer discretion.
- Random spot-checks may be conducted by volunteers during Clues 3 and 4 to ensure fair play.

Evaluation / Scoring Criteria

- Each clue successfully solved and collected: +10 points.
- Asking for a hint at any stage: -5 points.
- Teams are ranked on total points scored, and total time taken is used as a tie-breaker.
- Any disqualification during Clue 3 or Clue 4 removes the team from further contention.
- The top 5 teams on the combined leaderboard advance to the Finale Round.
- Finale Round format and venue will be communicated separately to qualifying teams.
