

PRAYUKTI 2026

WEB MAZE

Navigate. Adapt. Conquer the Web!

Event Overview

Web Maze is a web development challenge that turns front-end coding into a race through a series of connected checkpoints — a maze of design, responsiveness, and interactivity. Teams start at Level 1 and must build, adapt, and enhance a webpage at each checkpoint to unlock the next. Every level pushes a different skill: replicating a design accurately, making a website responsive across different screen sizes, and adding interactivity with JavaScript. There is no internet access during the event, so participants rely entirely on their own HTML, CSS, and JavaScript knowledge (plus any offline libraries provided) — true to the tagline: Navigate. Adapt. Conquer the Web!

Eligibility Criteria

- Open to students from any college, department, or year of study.
- Participation can be solo or in pairs — 1 or 2 members per team.
- Prior registration via the QR code / registration link is mandatory.
- Each participant may be part of only one team.

Contest Format — The Maze Structure

- Total contest duration: 4 hours, split across the 3 levels below with fixed time limits for each level.
- Level 1 — Build (90 minutes, 30 points): Teams are given a design mockup/wireframe and must recreate it using HTML & CSS with a focus on visual accuracy, layout, spacing, colours, typography, and clean implementation.
- Level 2 — Adapt (60 minutes, 30 points): Teams receive a pre-built website/template and must make the website fully responsive across specified desktop, tablet, and mobile screen sizes using HTML & CSS. Participants will be evaluated on responsive layouts, media queries, element positioning, scaling, and overall consistency across different viewports.
- Level 3 — Conquer (90 minutes, 40 points): Teams must implement specified interactive and dynamic features using JavaScript to make the website functional and engaging. Features may include forms, toggles, modals, navigation, validation, filtering, dynamic content, or other JavaScript-based interactions as specified in the final brief. Any JavaScript approach is allowed at this level — not limited to vanilla JS.
- Each level must be cleared (or judged complete) before the team can move to the next; unused time from an earlier level does not carry over. Teams are ranked first by total score across the three levels, then by total time taken.
- Exact themes, mockups, website templates, responsive requirements, and JavaScript tasks for each level will be revealed only at the start of that level.

Participation Guidelines

- Teams must report at least 15 minutes before the event start time.
- This is a strictly offline contest — no internet access, hosted documentation, AI coding assistants, or online code playgrounds are allowed at any point.
- Libraries and frameworks (CSS or JavaScript) are allowed, provided they are available offline on the venue systems — no internet-dependent CDNs. Let organizers know in advance if you need a specific library pre-installed.
- Level 3 specifically allows the use of any JavaScript library or framework, not limited to vanilla JS, as long as it is available offline.
- A basic offline code editor (e.g. VS Code with no extensions requiring internet) and browser will be provided at each system.
- Participants may bring their own laptops only if pre-approved during registration; otherwise, systems will be provided at the venue.
- Any pre-written code, templates, or boilerplate brought from outside is not allowed — all code must be written live during the event.

Rules & Penalties

- Any attempt to access the internet, external storage, or outside help results in immediate disqualification.
- Only the registered 1- 2 team members may write code; no assistance from outside the team is permitted.
- Each level has its own time cap; teams that do not clear a level within the cap forfeit that level's points but may be allowed to continue (at organizers' discretion) or the run ends there.
- Plagiarism or copying another team's code will lead to disqualification of both teams involved.
- Judges' decisions on level completion, scoring, and disputes are final and binding.

Scoring & Judging Criteria

- Level 1 — Design Accuracy (30 points): how closely the output matches the given mockup, including layout, spacing, colours, fonts, and overall visual appearance.
- Level 2 — Responsive Design (30 points): how effectively the website adapts across the specified desktop, tablet, and mobile screen sizes, including layout, navigation, typography, spacing, and element scaling.
- Level 3 — Functionality (40 points): whether the interactive and dynamic features work correctly as specified in the final brief.
- Total possible score: 100 points across all three levels.
- Code Quality — clean, readable, semantic, and logically structured HTML/CSS/JS implementation across all levels, factored into each level's score.
- Time Taken — total time taken to clear each level, used as a tie-breaker between equally-scored teams.

Prizes & Recognition

Top-ranked teams will receive certificates and prizes; details will be announced at the venue. Certificates of participation will be provided to all registered participants.

Organizers' Rights

- Organizers reserve the right to modify rules, level content, or the schedule if necessary.
- In case of any dispute, the judges' decision will be final.
- Any form of misconduct, unfair play, or tampering with systems will result in disqualification.

Registration

Scan the QR code on the event poster or visit the registration link shared by the coordinators. Early registration is recommended as team slots are limited.
