

ROBO WAR

(Battle of the Bots)

EVENT OVERVIEW

Robo War is a high-intensity robot combat competition where teams design and build remote-controlled combat robots to face off in one-on-one battles inside a specially built arena. Success depends on aggression, control, and the ability to disable the opponent while surviving hits. The event tests engineering skill, strategy, and nerve under real combat conditions.

TEAM SPECIFICATIONS

- Any team can participate in the Robo War competition.
- A team may consist of a maximum of 4 participants.

Team Name

- Every team must have a unique name.
- Techfest organisers reserve the right to reject entries from any team whose name they deem inappropriate, offensive, or conflicting.
- Organisers must be notified if a team's name has been changed.

Team Representative

- Each team must specify their team representative (leader) at the time of registration on the website.
- All important communications between Techfest organisers and registered teams will be conducted through their team representative.
- The team representative must submit valid contact details (phone number, email ID, etc.) at the time of registration.

ARENA SPECIFICATIONS

Dimensions	11 ft (length) x 9 ft (breadth) x 1 ft (height)
Note	Arena specifications are subject to change as per the final event setup.

ROBOT SPECIFICATIONS

Maximum Weight	8 kilograms
Control Type	Wireless remote control
Tyres	Metallic tyres are not allowed
Inspection	Robot must pass technical inspection before every match

POWER & CONTROL

Max System Voltage	24V DC
Battery Mounting	Securely mounted and insulated batteries are mandatory
Safety Systems	A main power cutoff and fail-safe are compulsory
Interference	Radio interference / jamming is strictly prohibited

MATCH DURATION & TYPE

- Matches will consist of 3 minutes of active fight time, exclusive of any time-outs. It is advisable, though not binding, to size battery capacity, power usage, and defenses to sustain a full 3-minute fight.
- The match will be regular 1-on-1 combat between two robots.
- A robot outside the arena is considered knocked out.
- A robot with no controlled movement for 10 seconds may be declared immobilized.
- Pinning is limited to 10 seconds.

WEAPONS

Allowed	Wedges, pushers, lifters, flippers, grabbers, hammers, spinners
Prohibited	Explosives, fire, projectiles, dangerous chemicals, electric-shock weapons, EMP/radio jammers, and any other unsafe weapon

MATCH FREQUENCY

- A team is allowed 30 minutes to prepare for its next match, calculated from the time the robot leaves the post-match staging area of its previous match.
- If the team fails to return with the robot ready to the pre-match staging area when called after the allotted time, the team may be forced to forfeit.
- Routine maintenance (e.g. battery charging) should ideally be completed within this period, or a backup should be kept ready.

CRITERIA FOR VICTORY

A robot is declared victorious if its opponent is immobilized. Points are awarded based on the following three criteria:

- Aggression** — judged by the frequency, severity, boldness, and effectiveness of deliberate attacks initiated against the opponent. Accidental attacks are not counted.
- Control** — judged by the ability to attack an opponent at its weakest point.
- Damage** — deliberate reduction of the opponent's functionality, effectiveness, or defensibility. Self-inflicted damage is not considered relevant.

Note: A robot winning a round against its opponent does not guarantee entry into the next round. If judges find the winning robot incompetent to advance, it may be disqualified. Judges may disqualify both robots of a match from advancing. All judges' decisions are final and binding; queries received after a decision will not be entertained. A robot deemed unsafe by the judges after a match has begun will be disqualified and declared the loser — the match will be halted immediately and the opponent awarded the win.

SAFETY RULES

- Compliance with all event rules is mandatory. Competitors are expected to adhere to the rules and procedures on their own accord and should not require constant policing.
- Special care must be taken to protect onboard batteries and pneumatics; robots without proper protection will not be allowed to compete.
- Proper activation and deactivation of robots is critical. Robots must only be activated in the arena, testing areas, or with the express consent of event coordinators.
- All participants build and operate robots at their own risk.
- Once robots have entered the arena, no team member may enter the arena at any point in time.
